

## From the Desk of Mrs. Lindley

**6<sup>th</sup> grade Math** – We have been working on many different concepts in the last few weeks. They will be tested on this material next week. Then we will be investigating three dimensional objects. Throughout the investigation they will be learning how to find surface area and volume of pyramids, cylinders, cones and prisms.

**7<sup>th</sup> grade Math** – We will be continuing our geometry study throughout the month of May. We are also continuing to solve multi-step equations.

**8<sup>th</sup> grade Math** – It is exciting to see the students continuing to work hard as the school year winds down. We are starting a new unit on polynomials which will include a brief study of factoring.

**6<sup>th</sup> grade Science** – We have been working hard gathering notes on the planets. We will be finishing this unit in the next couple of weeks.

**7<sup>th</sup> grade Science** – Inside Earth is the theme for the next several weeks. This includes learning about the earth's layers, heat transfer, earthquakes and volcanoes.

**8<sup>th</sup> grade Science** – We are continuing our study of thermal energy and we will be having a test toward the end of this week. We will use the time that we have remaining on cells and heredity.
